

POLICY FOR INSPECTION AND CONSTRUCTION OF MANHOLES

In conjunction with the new manhole ring and cover standard MH-RC of August 22, 1995, some changes are being instituted.

1. In addition to the current requirements the rings will be visually checked immediately before the grading and paving are accepted to assure the casting remains properly set. If the sewer permit has been accepted, it will be the grading and paving contractors' responsibility to assure the castings are properly set before their work will be accepted.
2. All manhole rings and covers delivered to worksites after January 1, 1996, shall comply with the August 1995 standard.
3. When the manhole is designed to extend above finished grade and is not required to be bolted, the ring shall be securely fastened on top of the manhole with a minimum of three- 3/4" diameter steel fasteners anchored 1 1/2 inches into the top adjustment ring.

Approved and adopted on this 29 day of Nov, 1995.
